
basic free reverb doesnt install

Posted by pinknaveed - 2007/08/21 09:58

I'm using a 7.2 HD 1 accel with pcie.

The package also contained an ignition pack with free trial plugins and couple of ffd's.

Reverb plugin was installed when the system arrived.I installed the trial plugins but most of them wouldn't activate inspite of using the codes supplied.It was very annoying to press esc 25 to 30 times.So I uninstalled it.But I did not do anything to the reverg plugin,but the plugin too got uninstalled and now I'm left without a reverb unit.Please suggest a way by which I can get this standard accessory free reverb unit.

Naveed.

What do you mean by "ffd's"? What is the free reverb your referring to, D-Verb, TL Space... There are many reverbs that have come free with PT over the years.
