
Surround in Digi CoreAudio?

Posted by nedd - 2007/11/30 01:14

Hi Paul,

I was wondering if your surround plug ins for pro tools le could also work within a digi coreaudio, so that finally we could also use 001/002/003 or other pro tools hardware for decoding surround formats like dts, without protocols running. Would love to watch movies and listen to surround music on studio monitors.

Do you plan to develop something like this?

greetings

Nedd
