
Mbox 2 Pro connectivity

Posted by vong53 - 2008/07/04 19:53

I'm looking into the purchase of the Digidesign Mbox 2 Pro Firewire Interface.

I currently use a Focusrite Saffire which is also firewire. If I power it with the external power supply I can use a 6pin to 4pin firewire adapter that allows me to attach to it to my laptop.

Since the Mbox 2 Pro also allows you to use an external power supply, does the same hold true? Can I use my 6pin to 4pin adapter to interface with my laptop?

Thank you all in advance.

Peace,

g

If the MBox 2 Pro is externally powered then, yes, I believe it can be used with a 4 pin cable.
