## Problem loading Waves Plugin

Posted by TheSoundPalace - 2008/07/06 00:56

---

I've been running HD3 with Mac OS and thought I would demo the new L3-16 Multimaximizer from Waves. I downloaded it, got it authorized and installed it.

But, for some reason, it only shows up in AudioSuite. I can't get it to show up on any individual track plugins, much less the Master track where I really need it.

I've obviously overlooked something but can't figure it out. Any clues?

Thanks.
