
Networking for dummy

Posted by alice123 - 2008/08/11 23:25

I'm new at networking and I want to start making my own network wires/cables for my office. I ordered this crimping tool from www.lducompany.com (crimper should be here in a few days) and I wanted to learn if there are any other kinds of network cat5 wire crimping tools out there that would work better? <http://www.liangdianup.com/inventory/459901.htm> is the location for the crimp pliers on their website, those are the ones that I bought. Funny that it says Germany on the handle of the pliers but I would guess they are made in China since the company I bought them from is in China. If you know of a name of a certain cat 5 wire crimper that would be better for me to use then please post it here. Thank you :)

Why are you posting a question about making networking cables on Pro Tools forums (I saw the same post on the DUC)??

Yeah shouldn't you post this on networkcableusers.org or something!

Is this the right tool for the job?
